Rwhois	<i>WHOIS server querying</i>
--------	------------------------------

Description

Queries WHOIS servers

Usage

```
whois_query(hostname, server="whois.iana.org", follow.refer=TRUE, raw.data=FALSE)
```

Arguments

hostname	Server hostname (or hostnames as vector) to return results for.
server	WHOIS server to query (default: whois.iana.org)
follow.refer	Whether to follow referral information from a WHOIS result to query a different WHOIS server. Default TRUE.
raw.data	Whether to dump raw output as a character string without parsing. Default FALSE. If TRUE, this option supercedes follow.refer and forces it FALSE.

Value

whois_query() returns a data.frame

Author(s)

Brad Cable

Examples

```
# Grab WHOIS data for a hostname
whois_query("bcable.net")

# Grab WHOIS data for an IP
whois_query("1.1.1.1")

# Grab WHOIS data for a hostname from a different whois server
whois_query("bcable.net", server="whois.verisign-grs.com")

# Grab multiple vectorized results
domains <- c("bcable.net", "google.com")
whois_query(domains)
```
